

HOPPER®

HOPPER® is a Moellering - Rubber and Plastic Products brand. Guided by our principles of Tradition and Innovation since the company's beginning in 1932, we have become a specialist in the fields of rubber, plastic and foam products. In partnership with our sister company, TSW Thenhausen Injection Molding and Mold Making, we develop and manufacture products for various industries, including the chemical, engineering and medical sector. We are known for our innovative solutions.

The passion for the equestrian sport has long been a family affair. This experience alongside our specialist knowledge of the materials rubber, plastic and foam led to the vision of creating innovative equestrian products. With this aspiration we created the HOPPER®: a game-changing mounting block for riders. With its lightweight material and no sharp edges, the Hopper sets the bar in terms of safety, weight, and functionality. Learn more about the Hopper: www.horsehopper.de/en!

HOPPER®

Mount your horse safely and easily!

The HOPPER® sets the bar in terms of safety, weight and functionality. Where other products made of wood or plastic require a compromise between stability and lightness, the HOPPER® delivers both. Using innovative foam technology, the Hopper minimizes the risk of injury to the horse whilst allowing for a safe and easy mount. And all that with only 2,8 kg. The Hopper is therefore suited for children, equestrian lessons or therapeutic horse back riding.

- ✓ No sharp edges
- ✓ Safety for horse and rider
- ✓ Easy mounting of a horse
- ✓ Easy transportation
