# HOPPER®

## THE LIGHT AND SAFE MOUNTING AID FOR EQUESTRIAN SPORTS

The HOPPER® sets the bar in terms of safety, weight and functionality. Where other products made of wood or plastic require a compromise between stability and lightness, the HOPPER® delivers both. Using innovative foam technology,

the HOPPER® minimizes the risk of injury to the horse whilst allowing for a safe and easy mount. And all that with starting from only 2.8 kg. The HOPPER® is therefore suited for children, equestrian lessons or therapeutic horse back riding.

- ✓ No sharp edges
- ✓ Safety for horse and rider
- ✓ Easy mounting of a horse
- ✓ Easy transportation from just 2.8 kg

# Hopper® PAD

## THE SADDLE PAD FOR OPTIMAL BALANCE

The HOPPERPAD is an innovation among saddle pads. In addition to the innovative shape developed with physiotherapists and veterinarians a special foam combination provides optimal pressure compensation for the horse's back. This unique foam consists of two components:

Memory Foam and Latex Foam. Viscoelastic Memory foam cells react instantly to the shape of the horse's back, the weight of the saddle, rider and the heat, and therefore adapt precisely to the horse's back and saddle. Pure natural latex provides through its very good recovery and suspension behavior optimal cushioning during movement, thus protecting the back muscles. The depressurization as well as the balancing behavior of the saddle pad has been determined by a sensor-based pressure point measurement. The HOPPERPAD provides the optimal connection and balance thanks to its unique foam combination between horse and rider.

- ✔ Ideal pressure distribution
- ✔ Physiologically optimized shape
- ✔ Balancing effect for imbalances
- ✔ Unique memory latex foam
- ✔ High-quality Alcantara cover
